Colorectal Surgery Interaction

Hi-Tech & hot topics in colon surgery

JULY 4th | 5th, 2019

scientific program

Humanitas Congress Center
Rozzano, Milan

developed by:

DIRECTOR
Prof. Antonino Spinelli

Colorectal surgery has undergone major developments over the last decade and is continuously evolving. From the introduction of laparoscopy, this has been the field of breakthrough techniques and technologies being developed at a high pace and aimed to improve patients outcomes.

Robotics, fluorescence guided surgery and single port and transanal approaches are some examples.

Discussions and controversies on their application in daily OR practice and on their clinical significance in colon surgery are common nowadays.

Our meeting will feature top experts in the field engaging the audience in hot discussions on such cutting-edge topics, to clarify the place of technologies and their safe implementation.
