INTRODUCTION

Minimally invasive surgery is widely diffused and represents the mainly approach in elective surgery today. It stands as a well-established reality also in emergency procedures that now constitute a significant amount of the surgical activity both in Central and Peripheral Hospital. With this monothematic event on minimally invasive surgery in emergency setting we want to put our focus on the *"Elective or emergency laparoscopic surgery?"* binomial and we aim for updating surgeons about topical issues, thanks to the assistance of experienced colleagues in several surgical areas, to the sessions and keynote lectures in which this congress is structured.

After the meeting at Riccione on May 2022, meeting in which the target was to figure out *"How far have we come?"*, this time the background to the congress will be the location of San Benedetto del Tronto, an important town of the Marche Riviera and one of the major seaside resorts of the mid-Adriatic.
