Rationale

Colorectal and proctological surgery is today a constantly evolving discipline, thanks to advances in minimally invasive and robotic surgery, oncological therapies, interventional procedures, regenerative medicine and the management of functional pelvic floor disorders. The introduction of new technologies and therapeutic strategies is significantly changing diagnostic and care pathways, making the continuous updating of professional knowledge and skills increasingly important.

The third edition of "New Trends and Actual Standards in Coloproctology" was created to offer an up-to-date overview of clinical and surgical practice in the colorectal and proctological field, comparing current standards with the latest innovations and therapeutic perspectives. The congress brings together specialists and experts of recognized national and international standing, fostering the sharing of scientific evidence, clinical experience and technical expertise.

Particular attention will be given to choosing the most appropriate treatment for the individual patient and to the need to integrate different skills and approaches. In this context, alongside oncological and surgical aspects, functional outcomes, quality of life and truly multidisciplinary, patient-centred management are becoming increasingly relevant.

Through keynote lectures, presentations, video presentations and moments of discussion with the experts, the congress aims to offer an opportunity for updating and debate on the main topics of modern coloproctology, promoting a dialogue between clinical experience, scientific evidence and new therapeutic possibilities.

Surgical and Non-Surgical Therapy of Haemorrhoidal Disease: Techniques Compared

Sclerotherapy with Sclerofoam vs. SHAPE: Skin-Sparing Haemorrhoidectomy And PExy vs. Automatic Ligator: New Era of the Hemorrhoids Surgical Treatment

DATE	3 December 2026
VENUE	Hotel St. Joseph – Via Salvatore Allende, 66 – 84131 Salerno

RATIONALE

Haemorrhoidal disease is one of the most frequent proctological conditions, and its treatment has been enriched in recent years with numerous options, from non-surgical to surgical procedures. The choice of the most appropriate technique depends on the grade of the disease, the symptoms and the characteristics of the patient, and requires in-depth knowledge of the indications, limitations and results of each approach.

The course compares three methods: sclerotherapy with sclerofoam, a non-surgical, minimally invasive treatment; SHAPE, a skin-sparing haemorrhoidectomy combined with pexy; and the automatic ligator, a recently introduced technique for the surgical treatment of haemorrhoidal disease.

The theoretical part, in which the speakers will illustrate the history, indications, contraindications and technical aspects of each procedure, will be followed by a practical part, in which participants will be able to explore the operative steps of each technique first-hand.
